

## Fork Positioner for Forklift

Forklift Fork Positioner - The fork positioner is actually a hydraulic device that allows the person driving to be able to control the forklift without leaving the seat. They are made out of top quality materials and are meant to be able to endure the most difficult operations and work environments. Side shifting units have the extra ability to be able to laterally position the entire load or the arms so as to facilitate much more accurate carrying and position in a faster and much more efficient method.

The fork pocket is rather unique and could enable the individual operating it to securely sway the blades into position without any worry of destroying the positioning cylinders. This could allow the driver the choice to execute simultaneous or independent fork movement, dependent upon the requirements of the job. For most lift trucks with non-OEM carriages, complete carriages are considered necessary. Standard OEM carriages can be transformed into fork positioners on available units.
